OBJECTIVES

Angular Developer with 1.5+ years of experience building enterprise-grade ERP systems. Experienced in developing complex reactive forms, handling business workflows, and building scalable frontend architectures using Angular, RxJS, and NgRx. Strong background in integrating REST APIs and working with large codebases in collaboration with backend teams.

EDUCATION

Bachelor's degree in computers & information from KSU

2019 – 2023

[Computer Science Department]

Graduation Project : Grade A+

ChemGeek : Created a comprehensive chemistry toolkit with experimental tools, calculators, and a database for students and researchers. Integrated third-party API for chemical equations and properties, as well as an AI model for compound data, reaction results, and molecule structures. The project includes a versatile units converter, aiming to enhance the study of chemistry by providing a unified platform for various functionalities.

TRAINING

ITI Web Development, PHP

07/2022 – 09/2022

Completed a comprehensive web development course covering key technologies:

JavaScript: Proficient in creating dynamic and interactive user interfaces.

MySQL: Skilled in designing and managing relational databases for efficient data handling.

PHP: Experienced in server-side scripting, adding logic and functionality to web applications.

Laravel Framework: Advanced knowledge in utilizing Laravel for streamlined web development, following MVC architecture principles.

COURSES

Route Full Stack, React Js , Node Js

- Develop and maintain full-stack applications using the MERN stack.
- Implement RESTful APIs to enable seamless communication between client and server.
- Conduct thorough testing and debugging to ensure the quality and reliability of apps.
- Contribute to the technical documentation for reference and reporting of the applications.
- Tech Stack: Node.js, JavaScript, Express.js, MongoDB, Bcrypt.js, HTML5, CSS3, React.js, Git & GitHub.

WORK EXPERIENCE

ALX Solutions, Junior Frontend Developer

08/2024 – present

- Built and maintained multiple ERP modules using Angular, including Accounting, Vehicle Rental, Inventory, Employees, and System Settings.
- Developed complex reactive forms with dynamic validation and business rules across ERP workflows.
- Implemented role-based access control and permissions for different user roles.
- Integrated frontend modules with backend REST APIs built using .NET.
- Worked on a large-scale Angular application with a shared component-based architecture.
- Gained deep understanding of end-to-end ERP business processes and data flow between modules.

Malops.io, Frontend Developer (Remote) 📄

02/2025 – 04/2025

- Independently developed a full-scale Angular application for a cybersecurity challenge platform.
- Built modular Angular architecture using Angular 19 with a mix of modules and standalone components.
- Implemented state management using NgRx Store and NgRx Effects for authentication and scoring logic.
- Integrated REST APIs with a Laravel backend to manage challenges, hints, and user progress.
- Developed dashboards and visualizations using Chart.js and ng2-charts.
- Improved user experience with real-time notifications using ngx-toastr.

PROJECTS

Online Food Order API, <https://github.com/MooRagab/Online-Food-Order> 

Overview:

- Developed a comprehensive, secure, and scalable RESTful API for an online food ordering system. This API facilitates seamless interactions between customers, restaurants, and delivery personnel by managing user authentication, order processing, payment integration, and real-time updates. The project incorporates best practices in security, efficiency, and maintainability using modern technologies and tools.

Key Contributions:

- Implemented secure user authentication using JSON Web Tokens (JWT) and bcrypt.
- Managed database operations with MongoDB and Mongoose.
- Integrated Cloudinary for image uploads and management.
- Developed order management and secure payment processing functionalities.
- Enabled real-time order tracking and notifications.
- Utilized Joi for input validation and error handling.
- Employed TypeScript, Nodemon, and Ts-node-dev for efficient development.

Technologies Used: Node.js ,Expres ,MongoDB ,Mongoose ,TypeScript ,JSON Web Tokens (JWT) ,bcrypt ,Cloudinary ,Multer ,Nodemailer ,Joi ,Cors ,Dotenv

E-Commerce App, <https://github.com/MooRagab/E-Commerce-API> 

Overview:

- Developed a secure and scalable RESTful API for an e-commerce platform, facilitating seamless management of users, products, and orders. The API integrates robust authentication, media management, and efficient data handling, ensuring a comprehensive backend solution for online stores.

Key Contributions:

- User Authentication: Secure authentication using JWT and bcrypt for password hashing.
- Database Management: Efficient data handling with MongoDB and Mongoose.
- Media Handling: Integrated Cloudinary for managing images and videos.
- Order Processing: Comprehensive functionalities for order management.
- Data Validation: Robust input validation using express-validator.
- Development Tools: Utilized tools such as Nodemailer and Multer for email and file handling.

Technologies: Node.js, Express, MongoDB, Mongoose, JWT, bcrypt, Cloudinary, Multer, Nodemailer, express-validator, dotenv, cors, slugify

Online VoteUp, <https://github.com/MooRagab/Online-UpVote-API> 

- The "Online-UpVote-API" is an API designed to manage online upvoting functionality. It provides a framework for developers to integrate upvoting features into their web applications. With this API, users can implement voting systems for various content types such as articles, comments, or posts, enabling community engagement and feedback mechanisms.

Key Contributions:

- RESTful API Design: Contributed to designing and implementing a RESTful API architecture, adhering to best practices for resource management and endpoint design.
- Authentication and Authorization: Implemented authentication and authorization mechanisms using JSON Web Tokens (JWT), ensuring secure access to the API endpoints.
- Data Modeling: Contributed to defining MongoDB schemas and using Mongoose for data modeling, optimizing database interactions and ensuring data integrity.
- Documentation: Assisted in documenting the API endpoints using Postman, generating comprehensive documentation for developers to understand and utilize the API effectively.
- Security: Contributed to enhancing the security of the API by implementing password hashing using bcrypt.js, mitigating the risk of unauthorized access and data breaches.

Technology Used: Node.js, Express.js, MongoDB (Mongoose), bcrypt, bcryptjs, Cloudinary, dotenv, Joi, jsonwebtoken, Multer, nanoid, Nodemailer, Nodemon and Vercel for Deployment .

TECHNICAL SKILLS

Node Js • Express Js • Angular • JavaScript • TypeScript • C# • C++ • Redux • Mongo DB • Mongoose (ODM) • Sequelize (ORM) • MySql • Multer • JWT • Socket.io • Git-GitHub • joi-validation • EJS • HTML • CSS • Jquery • Bootstrap • OOP • Data Structure & Algorithms

SOFT SKILLS

- Fast To Learn
- Communication
- Teamwork
- Problem-Solving
- Time Management
- Work Under Pressure
